

ShineFilter™ 96 well filter plate

ShineFilter™ 96 well filter plate, is a efficiency proved product that have been used by many of our customers in the world.

Description:

- ✘ The frame is 96-well PP (polypropylene) plates for simultaneous filtration of 96 samples.
- ✘ The filter membrane is made of cellulose mixed ester (0.2um).

Advantages:

- Economical by saving time and solvent and readily to automated handling systems.
- Efficient by testing 96 samples at the same time.

Usages:

It is commonly used in gene sequencing process. It contains a filter at the bottom, not silica based, so it will only filter the residue and prevent beads from falling out of the plate, while it won't trap the plasmids.

Quotation:

Cat. No.	Product Name	Pack	Price(€/ pack)
SG5006	96 Well Paper Filter Plate	10 pieces	33.6
